

## Multi-Purpose Cleaner Product Application Sheet

### General Cleaning

**eZall®** products are 100% plant-based, completely non-toxic, non-corrosive, readily biodegradable and safe to use in all cleaning applications.

#### Applications:

- Walls and woodwork
- Floors
- Carpet & upholstery cleaning
- Restrooms
- Graffiti, Tar & Gum Removal

For general cleaning, **MULTI-PURPOSE CLEANER™** is economical and particularly effective in heavy-duty institutional applications. It is people and plant safe and safe to use on all surfaces when used as directed.

When diluted 1 part **MULTI-PURPOSE CLEANER™** to 10 parts water, or up to 100 parts water depending on the soil, it is very effective in removing most hydrocarbon soils. Note that **MULTI-PURPOSE CLEANER™** can not attach to inorganic soil such as scale or rust. It can be applied by spray, soak, swab, or steam. The following dilutions are suggested:

#### **Walls, Woodwork and Windows 1:80 to 1:300**

As a wall cleaner, **MULTI-PURPOSE CLEANER™** does an exceptional job on virtually any surface. It is safe on paint, and will not take the plasticizer out of acrylic type wall coverings and wall papers. For cleaning walls, it is recommended that the washing always be done from the bottom up, and the rinsing from the top down. This will eliminate any potential streaking. For walls, mix 1 part **MULTI-PURPOSE CLEANER™** to 80 parts water as a good rule of thumb. Rinse with water or just wipe off.

As a wood cleaner, **MULTI-PURPOSE CLEANER™** is completely safe with no adverse effects such as spotting, streaking or raising the grain. It can be used on bowling alleys, bowling pins, doors, desks, tables, chairs, cabinets, railings,

etc. Use 1 part **MULTI-PURPOSE CLEANER™** to 80 parts water.

As a window and glass cleaner, very little **MULTI-PURPOSE CLEANER™** is required, and if too much is used, filming or streaking may occur. Use 1 part **MULTI-PURPOSE CLEANER™** to 300 parts water and squeegee off. Glass will be cleaner and even stay cleaner longer as **MULTI-PURPOSE CLEANER™** leaves an anti-static effect.

#### **Furniture 1:80**

**MULTI-PURPOSE CLEANER™** is safe to use on plastic, laminate, wood, cane, bamboo, metal, chrome, fabric and leather. Use a solution of 1 part **MULTI-PURPOSE CLEANER™** to 80 parts water for cleaning all your furniture.

#### **Upholstery and Rugs 1:10 to 1:100**

Use 1 part **MULTI-PURPOSE CLEANER™** to 100 parts water in cleaning rugs and carpets with cleaning machines. For spotting, use 1 part **MULTI-PURPOSE CLEANER™** to 10 parts water on spots, chewing gum, and stains - sponging it on, agitating with soft bristle brush, and then wipe thoroughly with a towel. Do not allow the carpets to become overly saturated with water and **MULTI-PURPOSE CLEANER™** solution. Since the **MULTI-PURPOSE CLEANER™** will not completely evaporate, and carpets cannot be rinsed off like walls or floors, care must be taken not to use **MULTI-PURPOSE CLEANER™** too concentrated. Residue left in the carpet will continue to clean even the bottom of people's shoes - causing "dirty spots" to appear where concentrations have been too high or too wet in the cleaning. Should this happen, the addition of water to the spots will clean them, then towel thoroughly, fan, or vacuum out all moisture with an extractor. Employees sometimes think if a little is good, a lot more is better, but when using

All product data, including suggested dilutions and procedures are believed to be correct. Users of **eZall®** products should perform their own test(s) to determine the suitability of each product for their own purposes. The products discussed are sold without any warranties either expressed or implied, including warranties of merchantability and of fitness for a particular purpose.

**MULTI-PURPOSE CLEANER™** on carpets, this philosophy can be a headache to maintenance and sales personnel.

Remembering the above caution, a solution of 1 part **MULTI-PURPOSE CLEANER™** to 40 parts water is a good solution for seating upholstery -- brushing on and then toweling off. Stains and spots may take a higher concentration, but avoid getting furniture too wet or more than a concentrate of 1 part **MULTI-PURPOSE CLEANER™** to 20 parts water. Use an extractor whenever possible.

### **Fabrics-Spotting & Laundry Full strength to 1:100**

For bedspreads, curtains, towels, sheets, or any fabrics, **MULTI-PURPOSE CLEANER™** becomes an excellent stain and spot remover. It is effective on the following types of stains: Alcohol, food, milk, ammonia, fruit, beer, fruit juices, nail polish, blood, nicotine, butter, glue, oil, candy, grass, ointment, chewing gum, grease, chocolate, household cement, ice cream, cocktails, smoke, coffee, inks, soft drinks, cologne, perfume, iodine, soot, colored pencil, ketchup, sugar, cooking oil, lipstick, tar, cosmetics, mayonnaise, tea, medicine, water colors, metal polish, dyes, non-acrylic waxes, eggs, mildew, wine, and many more.

**MULTI-PURPOSE CLEANER™** may be used full strength, allowed to sit 15 minutes, brushed or agitated into the stain and then rinsed with warm water. If it is an old stain, or very stubborn, repeat the process allowing to sit for 15 - 30 minutes in warm water after agitating; then rinse. Several applications may be necessary, but usually the stain will be removed after one application. Note that certain stains such as coffee, tea or beverages, which have been previously washed with caustics, may have no remaining hydrocarbon, which is necessary for **MULTI-PURPOSE CLEANER™** to attack and remove. Tannin is an example of a natural dye that may not be removable once the esters, fats or other protein molecules have been removed by washing with other chemicals.

**MULTI-PURPOSE CLEANER™** may be added to the laundry at the same time as the laundry powder at a rate of 1 ounce per gallon of water. It increases the cleaning power of the detergent or soap and assists in removing heavy oils, protein, dirt, inks, etc. For lighter cleaning, **MULTI-PURPOSE CLEANER™** may be used alone in home laundry applications. Some facilities use it

without detergent at a higher concentration for their personnel's uniforms, napkins, table cloths, etc. Chlorine and softeners are compatible with **MULTI-PURPOSE CLEANER™** and may be used as usual.

A note should be made at this point: Washing machines that have accumulations of residues from the soap powders and detergents previously used will be washed free by **MULTI-PURPOSE CLEANER™**. There have been occasions when this cleaning has left the washer filled with the "gunk" which has been lifted from under the agitator of the machine. It is recommended, therefore, that machines with heavy encrusting be run through a wash cycle with only **MULTI-PURPOSE CLEANER™** and water, and then rinsed before beginning a complete change to **MULTI-PURPOSE CLEANER™**.

### **Appliances 1:100**

**MULTI-PURPOSE CLEANER™** is an effective cleaner of all appliances -- large or small -- inside or out. Use 1 part **MULTI-PURPOSE CLEANER™** to 100 parts water for the exteriors of washers, refrigerators, dryers, ranges, small appliances, air conditioners, etc. On stoves, grills, fans, vents, filters, etc. where heavy accumulations of grease and oil exist, use a solution of 1 part **MULTI-PURPOSE CLEANER™** to 5 - 20 parts water, depending on the soil. It may be applied by spray, soak, or sponge. Rinse or wipe as necessary. Always apply cleaner from bottom up and remove from top down to avoid streaking.

### **Bathrooms 1:50**

1 part **MULTI-PURPOSE CLEANER™** to 50 parts water is used for bathroom floors, walls, sinks, toilet bowls, decor cleaning, light fixtures, etc. SC-Bathroom Cleaner may be used for sinks, toilet bowls and shower floors. If **MULTI-PURPOSE CLEANER™** is used too concentrated, any residue left on smooth tile finishes may feel tacky under foot.

### **Light Fixtures 1:20**

Apply **MULTI-PURPOSE CLEANER™** by spray or sponge at 1:20 parts water and allow to sit for 15 minutes before rinsing or wiping dry. For very yellowed lenses, allow lens to soak for 1 hour before rinsing and wiping dry.
